

Elad Limited liability company

179 V Gogol St., Dimitrovgrad town, Ulyanovsk region, Russia, 433504 Tel/fax +7 84 235 768 20, E-mail: elad@eladrti.ru, www.eladrti.ru

m ion & Size est Items	BFW06-1SN 1SN 1/4"	Test Date: Mar 10, 2017		
	1SN 1/4"	To at Otam dand	Test Date: Mar 10, 2017	
est Items		Test Standard	EN853	
	Test Standard	Test Result	Item Judgment	
laterial (NBR content should more than 40%,Carbon content should less than 15%	NBR 45% Carbon 10%	Qualified	
nside Diameter	Between 6,2 mm ~ 7,0 mm	6,3 mm	Qualified	
Outside Diameter	Should not exceed 14,1 mm	13,2 mm	Qualified	
Vorking Pressure	Max 22,5 MPa	22,5 MPa	Qualified	
Proof Pressure	Max 45 MPa	45 MPa	Qualified	
Sursting Pressure	Max 90 MPa	90 MPa	Qualified	
send Rate	Mini 100 mm	100 mm	Qualified	
ength	Each roll should be in 50 Meters length	50 Meters	Qualified	
mpulse test	According to EN853, test temperature 100°C. The hose can undertake at least 150000 times impulse and should not leak or crack.	Pass	Qualified	
Cold Flexibility	According to EN853, testing in -40°C the inner and outer rubber should not crack. Back to the normal temperature then pressure testing, the hose should not leak or crack	Pass	Qualified	
acuum Resistance	According to EN853,testing the hydraulic hose and its hose assemblies, the Max negative pressure should be -0.8 Bar	-0,8 Bar	Qualified	
brasion resistance	For 1SN hydraulic hose, according to EN853, vertical pressure (25±0.5)N, after 2000 times the abrasion should not more than 0.5g	0,3 g	Qualified	
dhesion between Components	AS ISO8033 ,the adhesion between components shall be over 2.5KN/M	2.7KN/M	Qualified	
18 Oil resistance	According to ISO1817, soak the inner rubber into 100°C oil for 168 hours, it should not shrink or expand more than 25%	20%	Qualified	
	According to ISO 1817, soak the outer rubber into 70°C oil for 168 hours, it should not shrink or expand for more than 100%	60%		
Vater-based fluid esistance	As ISO1817, soak the hose lining and cover into 70°C test liquid for 168 hours made up of 1:2 distilled water and ethanediol, test the lining and cover should no shrinkage and the expand for cover should less than 25% and 100% for lining	Pass		
Vater resistance	As ISO1817, soak the hose into 70°C water for 168 hours, test the lining and cover should no shrinkage and the expand for lining should less than 25% and 100% for Cover	Cover 90% Lining20%		
ozone resistance	According to EN853 first method, enlarge to two times the outer cover should not leak or crack.	Pass	Qualified	
Concentricity	As EN 24671, the concentricity of hose for Max variation between ID ~ OD is 0.8 and between ID ~ Reinforce is 0.4	0.8/0.4	Qualified	
	utside Diameter forking Pressure roof Pressure ursting Pressure end Rate ength pulse test old Flexibility acuum Resistance dhesion between omponents ill resistance fater-based fluid sistance fater resistance	Should not exceed 14,1 mm forking Pressure Max 22,5 MPa Max 45 MPa Max 90 MPa and Rate Mini 100 mm Each roll should be in 50 Meters length According to EN853, test temperature 100°C. The hose can undertake at least 150000 times impulse and should not leak or crack. According to EN853, testing in -40°C the inner and outer rubber should not crack. Back to the normal temperature then pressure testing, the hose should not leak or crack According to EN853, testing the hydraulic hose and its hose assemblies, the Max negative pressure should be -0.8 Bar For 1SN hydraulic hose, according to EN853, vertical pressure (25±0.5)N, after 2000 times the abrasion should not more than 0.5g As ISO8033, the adhesion between components shall be over 2.5KN/M According to ISO1817, soak the inner rubber into 100°C oil for 168 hours, it should not shrink or expand more than 25% According to ISO 1817, soak the outer rubber into 70°C test liquid for 168 hours, it should not shrink or expand for more than 100% As ISO1817, soak the hose lining and cover into 70°C test liquid for 168 hours made up of 1:2 distilled water and ethanediol, test the lining and cover should no shrinkage and the expand for cover should less than 25% and 100% for lining As ISO1817, soak the hose into 70°C water for 168 hours, test the lining and cover should no shrinkage and the expand for cover should less than 25% and 100% for Cover Zone resistance As EN 24671, the concentricity of hose for Max variation between ID ~ OD is 0.8 and between	utside Diameter Should not exceed 14,1 mm 13,2 mm 27,5 MPa 22,5 MPa 24,5 MPa 24,5 MPa 24,5 MPa 24,5 MPa 25,5 MPa 25,5 MPa 25,5 MPa 26,5 MPa 26,5 MPa 26,5 MPa 26,5 MPa 27,5 MP
